

Our doctors take pride in their expertise, staying current with the latest procedures and techniques. In addition, our highly qualified staff, registered nurses, and certified dental assistants ensure your experience is as comfortable as possible, while handling insurance claims with speed and accuracy.

Our goal is to exceed your expectations and put a smile on your face.

OUR SERVICES, YOUR SMILE

At Great River Oral and Maxillofacial Surgery, your comfort and care are our number-one priority. We provide a variety of advanced procedures in a soothing environment, and offer general or local anesthesia, nitrous oxide, and intravenous sedation during treatment for qualified patients. Our in-office surgery is the most efficient and cost-effective way to maintain maximum patient comfort and safety while performing many procedures including:

- + Wisdom teeth removal
- + Dental implants
- + Facial trauma
- + Oral pathology/biopsy
- + CT scans
- + Botox®
- + Impacted teeth exposure
- + Bone grafting
- + Jaw surgery
- + Sleep apnea

Visit our website for the full scope of services we offer.

Teeth Extractions Including Wisdom Teeth

We specialize in the surgical removal of all teeth, including wisdom teeth. This third set of molars begins erupting in the mouth during the teenage years, and early removal is advisable. Anesthesia is available to most patients, providing a painless transition to a sleep state during the procedure. Extractions are usually an uncomplicated, outpatient process, with patients returning to normal activities within a few days.

OUR TEAM OF SPECIALISTS

schedule an appointment today.*

GreatRiverOMS.com

“After more than 20 years of service, the vast majority of dental implants first placed by oral and maxillofacial surgeons in the United States continue to function at peak performance. More importantly, the recipients of those early dental implants are still satisfied they made the right choice. If properly cared for, dental implants can last a lifetime.”

— American Association of Oral and Maxillofacial Surgeons

Tooth Replacement: *Implants are the best way to replace teeth.*

Why dental implants?

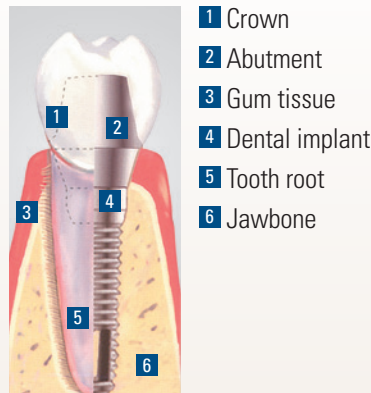

Cavities, periodontal disease, trauma—teeth can be lost for any number of reasons. Your dentist may recommend a dental implant:

1. to replace the root of the missing tooth, or
2. to rebuild your tooth with an implant crown.

Compared to other treatment options such as bridges and removable partials, an implant with an implant crown offers a natural-looking and long-lasting solution that will require fewer follow-up office visits.

With a dental implant and implant crown, you'll be able to chew, speak and socialize without embarrassment. This state-of-the-art method minimizes the amount of bone that will be lost in the area of the missing tooth and helps maintain natural facial contours.

Anatomy of an Implant:

SINGLE AND MULTIPLE IMPLANTS

Your dentist may recommend replacing a single tooth, or multiple teeth, with implants.

Benefits of Single-Tooth Implants:

- + Look, feel and function like natural teeth.
- + Do not compromise adjacent teeth by grinding them down for a bridge.
- + Provide excellent strength to handle chewing forces in the molar region.
- + Help to preserve bone by replacing tooth root.
- + Require same home care as natural teeth.

Benefits of Retained Dentures:

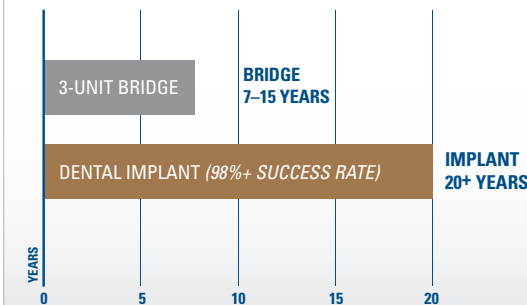

- 1 Implants
 - 2 Dentures
- + Restore natural chewing ability.
 - + Increase stability of the denture.
 - + Improve speech.
 - + Help to preserve bone.
 - + Maintain integrity of the facial structure.

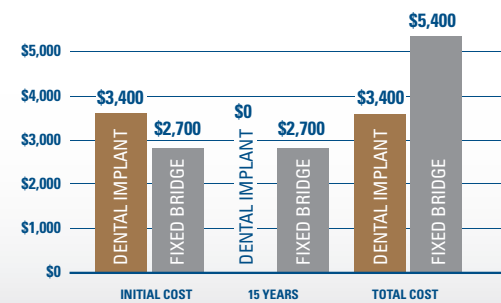

IMPLANTS VERSUS BRIDGES

While bridges may require additional shaping and generally need replacement after approximately 10 years, implants rarely need maintenance or replacement.

LIFE SPAN OF DENTAL IMPLANT vs. BRIDGE

15-YEAR COST COMPARISON (ESTIMATED) OF SINGLE-TOOTH IMPLANT WITH CROWN AND 3-UNIT BRIDGE

NOTE: Graph depicts average costs of a single implant versus a 3-unit fixed bridge. Results will vary depending on provider, geographic region, procedures and patient health.

AM I A CANDIDATE FOR A DENTAL IMPLANT AND AN IMPLANT CROWN?

Your dentist will perform an oral examination to make specific recommendations regarding the best missing-tooth replacement technique for you.

HOW DO I GET STARTED?

To begin treatment, call today and schedule an implant treatment consultation with one of the surgeons. The doctor will determine your patient-specific treatment plan and coordinate all arrangements with your dentist.

WHAT ARE MY PAYMENT OPTIONS?

We present each patient with a cost estimate, and there are several payment-arrangement options available: cash, check, credit card or CareCredit.SM

“My old dentures hurt and embarrassed me... now I feel better, look better and can eat anything on the menu at a restaurant.”
